EASY • CONVENIENT • PROVEN

Optimized solution for sample collection, nucleic acid stabilization and microbial profile snapshot

The OMNIgene®-VAGINAL device is validated for the collection and stabilization of microbial DNA and RNA for molecular microbiology and microbiome research.

- Easy self-collection of high quality nucleic acids from vaginal samples
- Ensure the microbial profile accurately represents the in vivo profile
- Stabilize DNA and RNA at room temperature for up to 4 weeks – no cold chain transportation required
- High quality nucleic acids suitable for molecular downstream applications (i.e., PCR, RT-qPCR, microarray, NGS)

Collection device catalog #: OMR-130

Benefits of snapshotting a sample for quantitative analysis

Stabilization of the sample at point of collection ensures:
- Neutrality
- Richness
- Abundance
- Reproducibility
- Stability

Benefits
- Collect microbial nucleic acids from a single vaginal sample
- Minimize bias introduced by microbial growth and nucleic acid degradation
- Maintain DNA and RNA integrity in typical ambient temperature fluctuations (e.g., -20°C to 30°C)
- Eliminate the costs associated with temperature controlled shipping
- Minimize noise in your data analysis with reliable microbiota profile

Product specifications

Pre-use:
Shelf-life: 12 months

Post sample collection
Storage conditions: 15°C to 25°C
Sample stability: 30 days

Kit contents

- Collection tube
- Sterile swab
- Instructions

Easy collection

Remove the tube from the packaging.
Remove the swab from the packaging using the handle only.
Gently insert the swab 3 to 5 cm into the vagina.
Move the swab in several full circles along the vaginal walls for 20 seconds.
While holding the swab in one hand, carefully unscrew the cap from the collection tube.
Insert the swab into the bottom of the tube and snap the shaft off at the break point.
Tightly screw the cap back onto the tube.
