

Product change notification

Products affected:  **ORACollect•RNA**

Catalog number: ORE-100, OR-100

Description: ORACollect•RNA

Change description: ORACollect•RNA (OR-100 and ORE-100) kits will be manufactured with a blue double-ended cap instead of a red double-ended cap. To reflect the cap color change, the device catalog numbers will change from OR-100 and ORE-100 to OR-100.025 and ORE-100.025, respectively.

Reason for change: DNA Genotek has received an increased demand for ORACollect•RNA sample collection devices in response to the ongoing SARS-CoV-2 pandemic. In an effort to increase production of the kits, while demand is higher than usual, we will be manufacturing ORACollect•RNA kits with a blue double-ended cap instead of the red double-ended cap. When ORACollect•RNA demand returns to normal, DNA Genotek will revert back to manufacturing with red double-ended caps. A notice will be provided when the change back to red takes place.

Effective date of change: May 25, 2020
